USHERING IN A NEW ERA OF COMPLIANCE

ITTS - a smart and cost-effective air cargo compliance management solution

Navigating international trade regulations can be a nightmare for businesses. Each country has its own set of rules, written in languages that only legal experts can decipher.
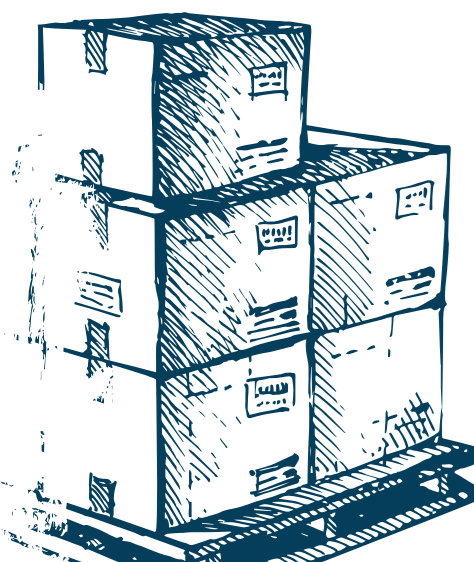

This complexity is amplified when it comes to handling special cargo and dangerous goods, demanding valuable time and money from companies that rely on pricey experts for assistance.

On the other hand, failure to comply with these regulations can lead to criminal penalties for airlines and their staff, removal from trusted trader programs, serious loss of reputation, etc.

But what if there was a way to make regulations more transparent and accessible?

Be Informed's International Trade and Transport Compliance Solution (ITTS) empowers organizations to understand and comply with international trade regulations, all in one easy-to-use web-based interface.

ITTS makes global trade simpler, faster, and more cost-effective, from checking shipment requirements to resolving compliance issues.

Digitalizing the trade compliance process

Our solution empowers air cargo stakeholders to navigate the compliance landscape effortlessly, ensuring smooth sailing throughout the shipment process.

Unparalleled Coverage and Holistic Assessments
Unlike traditional compliance solutions, ITTS takes a comprehensive approach. We view the entire transaction as our scope, meticulously checking every aspect against a growing range of international regulations.

Global Sanctions & Export Control Screening
Manual compliance checks become a thing of the past. As soon as a booking is received, ITTS conducts thorough checks against over 1000 sanction lists available in over 100 languages every 5 minutes. At the same time, every import and export control is also checked.

By staying vigilant, ITTS ensures that cargo shipments remain in compliance, no matter where it's headed.

Continuous Compliance Verification
ITTS goes above and beyond, our system automatically examines shipments against the growing number of regulations and your internal policies.

Seamless Integration and Real-Time Results
Through seamless integration with the organization's existing air cargo infrastructure via APIs built on IATA standards, ITTS seamlessly integrates into the organization's current workflow. The comprehensive compliance check results are delivered in a split second, saving employees valuable time and effort.

Centralized Platform for Enhanced Transparency
No more hopping between multiple platforms or systems. ITTS provides a unified platform where employees can access all compliance check details, monitor workflows, and track case statuses. It's a streamlined experience, putting all the information you need right at your fingertips.

Unwavering Compliance Assurance
Experience peace of mind with ITTS. Our scalable and reliable software solution guarantees compliance, allowing employees to focus on their core business objectives. Rest assured, knowing that their cargo operations are backed by cutting-edge technology designed to stay compliant every step of the way.

Driving Cost Efficiency and International Trade Facilitation:
ITTS is not just another compliance solution; it's a game-changer. By reducing the costs associated with demonstrating compliance across international borders, ITTS empowers organizations involved in international trade and transport. Whether you're moving people, goods, or money across borders, we've got you covered.

Move beyond border with smart regulations

Our mission does not simply stop at sanctions screening and import-export control checking. We are committed to continuous improvement. Our current focus is on expanding article screening to encompass customs regulations, including duties, quotas, permits, and prohibitions.

At the moment, the air cargo industry still works with siloed content. Our ultimate goal is to achieve end-to-end compliance with smart regulations.

Therefore, we're teaming up with top experts in law and computer science to bring our vision of a one-stop-shop for compliance information to life.

What are smart regulations?

Imagine having a user-friendly system that simplifies the complex world of regulations governing your business operations. That's exactly what smart regulations offer. They provide businesses with a straightforward interface that combines transaction information with machine-readable versions of the rules to determine the specific regulatory requirements for each transaction.

By utilizing open standards like FLINT, smart regulations enable governments to collaborate and offer cross-border, cross-policy domain services. This means that every step of a cross-border supply chain becomes easier, with reduced administrative burdens for all parties involved.

We're currently implementing these standards in projects for the United States and the Netherlands.

The development of ITTS

DUTCH TAX ADMINISTRATION	OLO	NATIONAL PERMIT PORTAL
Be Informed platform established for the Dutch Tax Administration and Wolters Kluwer	Supported the Dutch government to provide transparent access to regulations and government information for citizens and companies	Designed and built the Dutch national permit portal, simplifying procedures for citizens and businesses
